

Task for Web/Frontend Development Internship.

Design can be seen in the document as well as in the folder which we have sent you.

Use the API Provided by : <https://newsapi.org>

Problem Statement :

Create a single page web application for displaying the new articles. Upon clicking a card user should be taken to respective website source.

Functionalities :

1. User should have ability to see the news depending upon the keyword.
2. User should be able to filter the new source ex : CNN, BBC News
Use this API to show available sources (<https://newsapi.org/v2/sources>)
3. User should have ability to sort the news by category
ex: Popularity
4. At a time show only 10 articles if the api gives more than 10 results then paginate.

Note: Feel free to use any frontend framework or use plain javascript.

Extra points for implementing:

1. Using Vanilla JavaScript
2. Mobile responsive web page.
